

Office Supplies Request Management System

From Process Analysis to Deployed Application

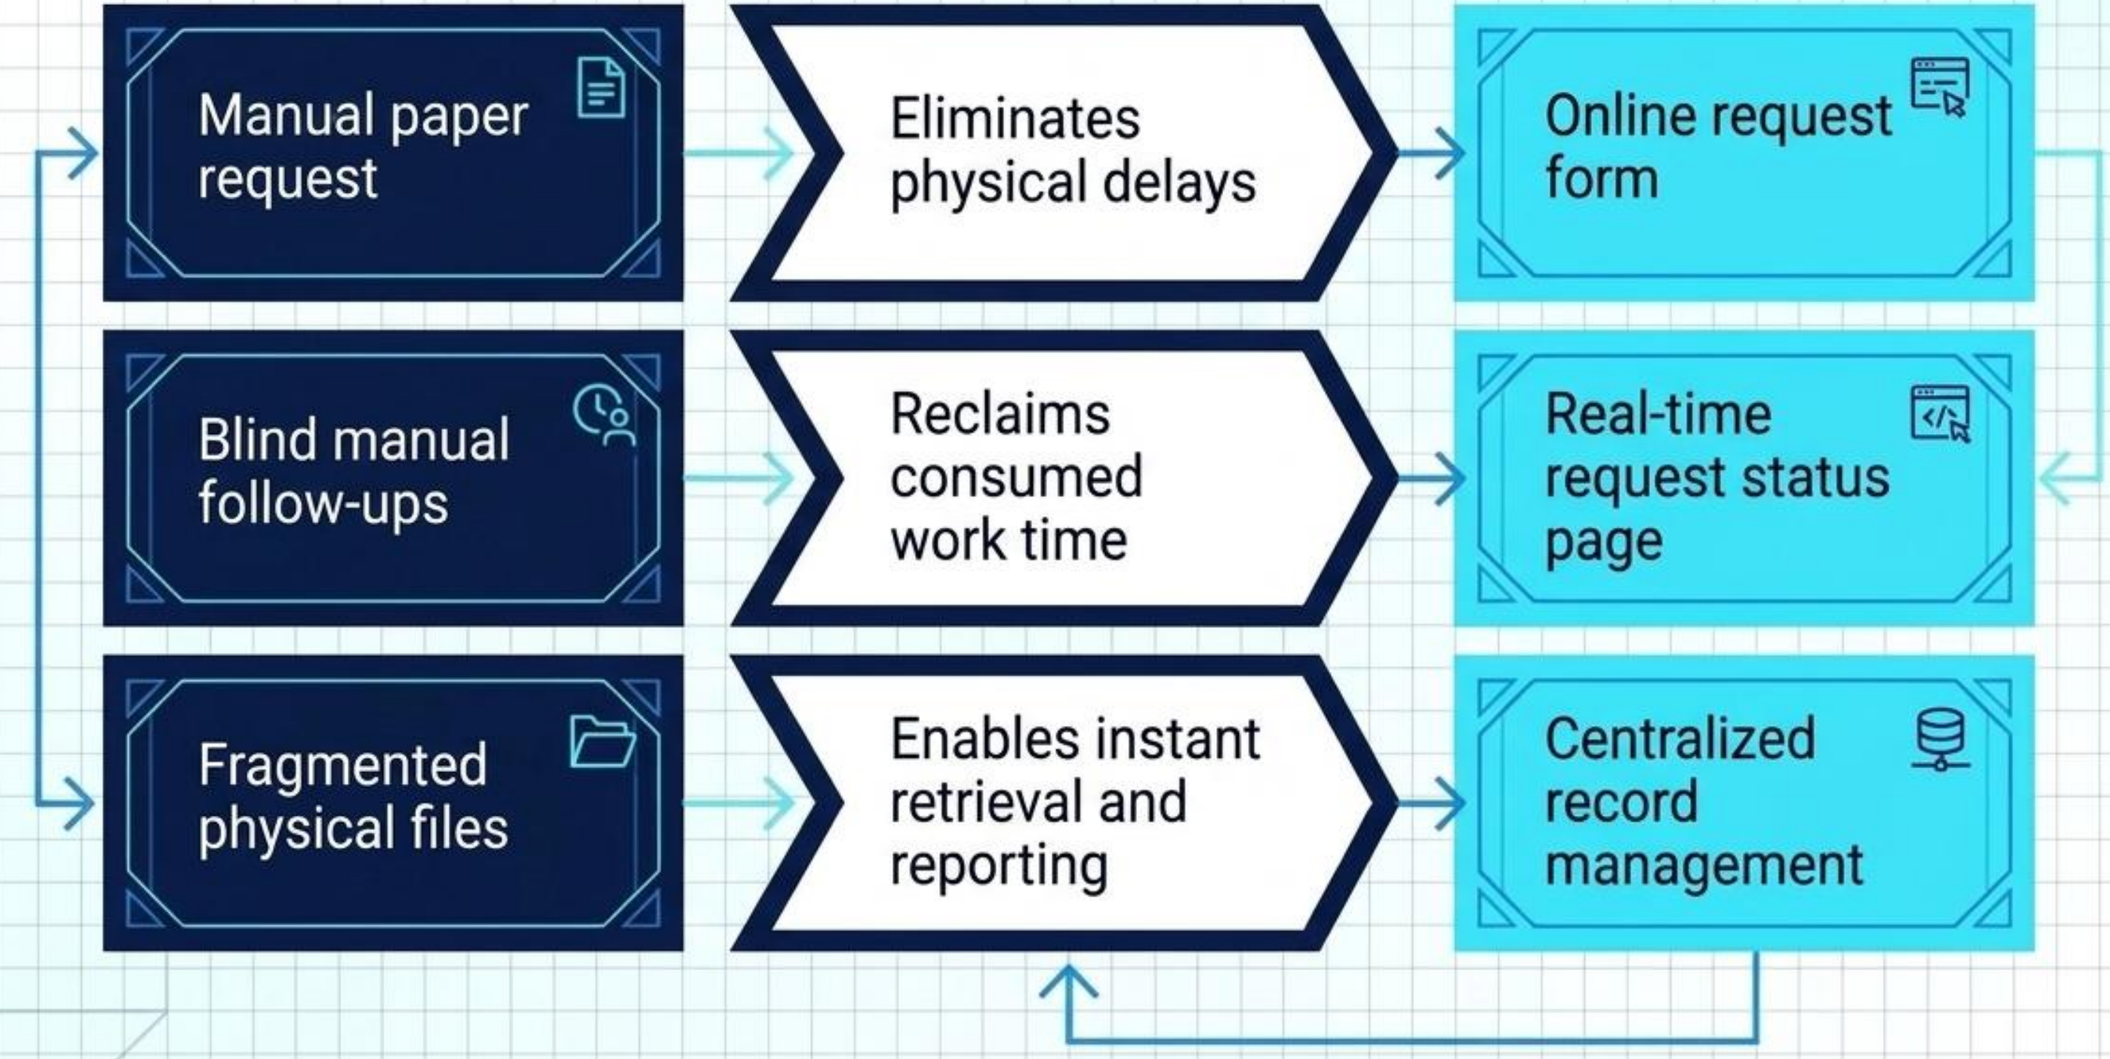

Gemini Notebook

The Operational Bottlenecks

Gemini Notebook

Operational Transformation Matrix

Gemini Notebook

System Actors and Access Boundaries

The Employee (Submitter)

Create new supply requests, view personal request history, track real-time status.

The Approver (Manager)

Review pending requests, approve/deny/update status, add decision timestamps.

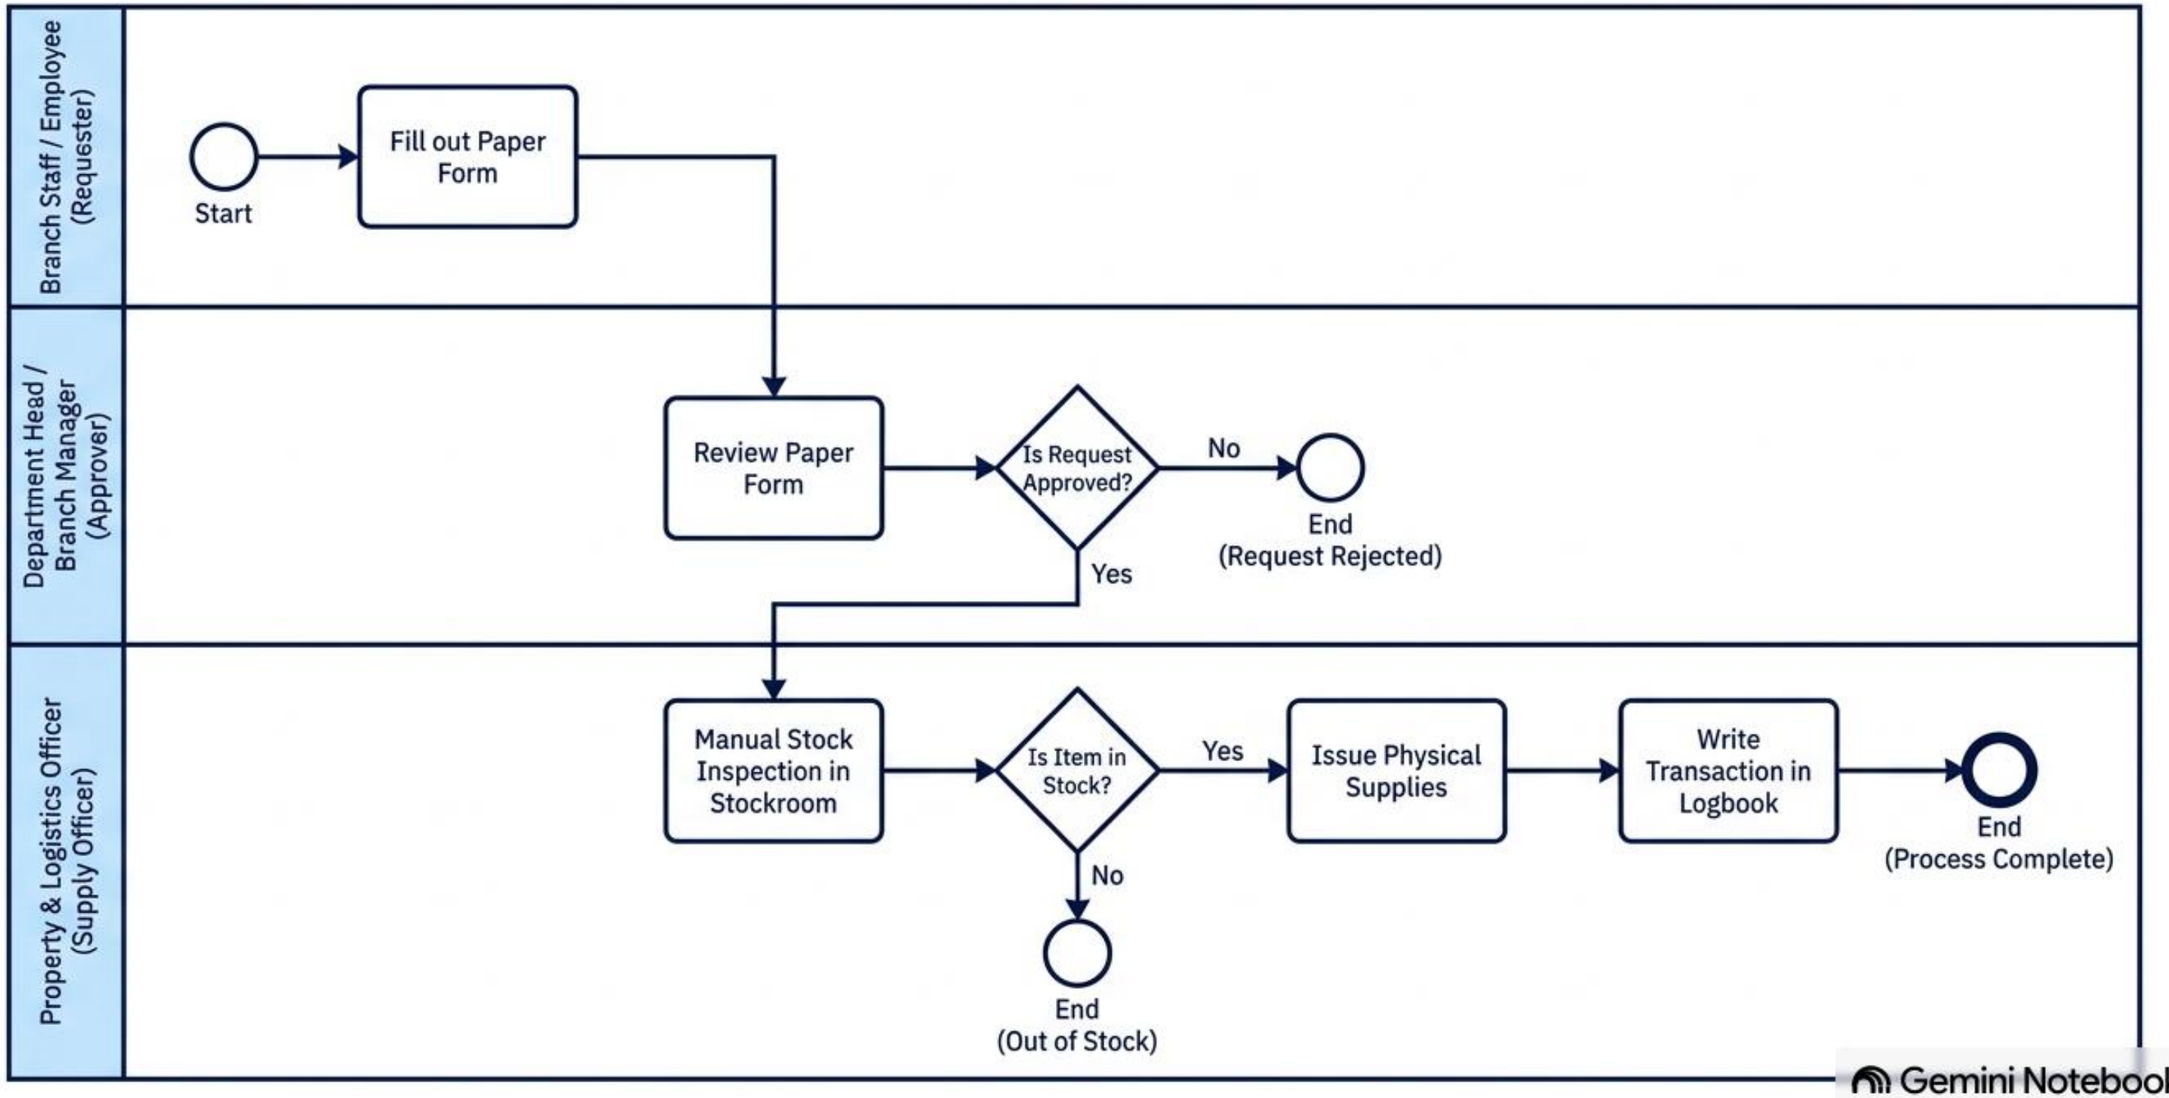

Base44 System (The Engine)

Enforce validation rules, route data to permanent storage, update relationship records, maintain persistent state.

Gemini Notebook

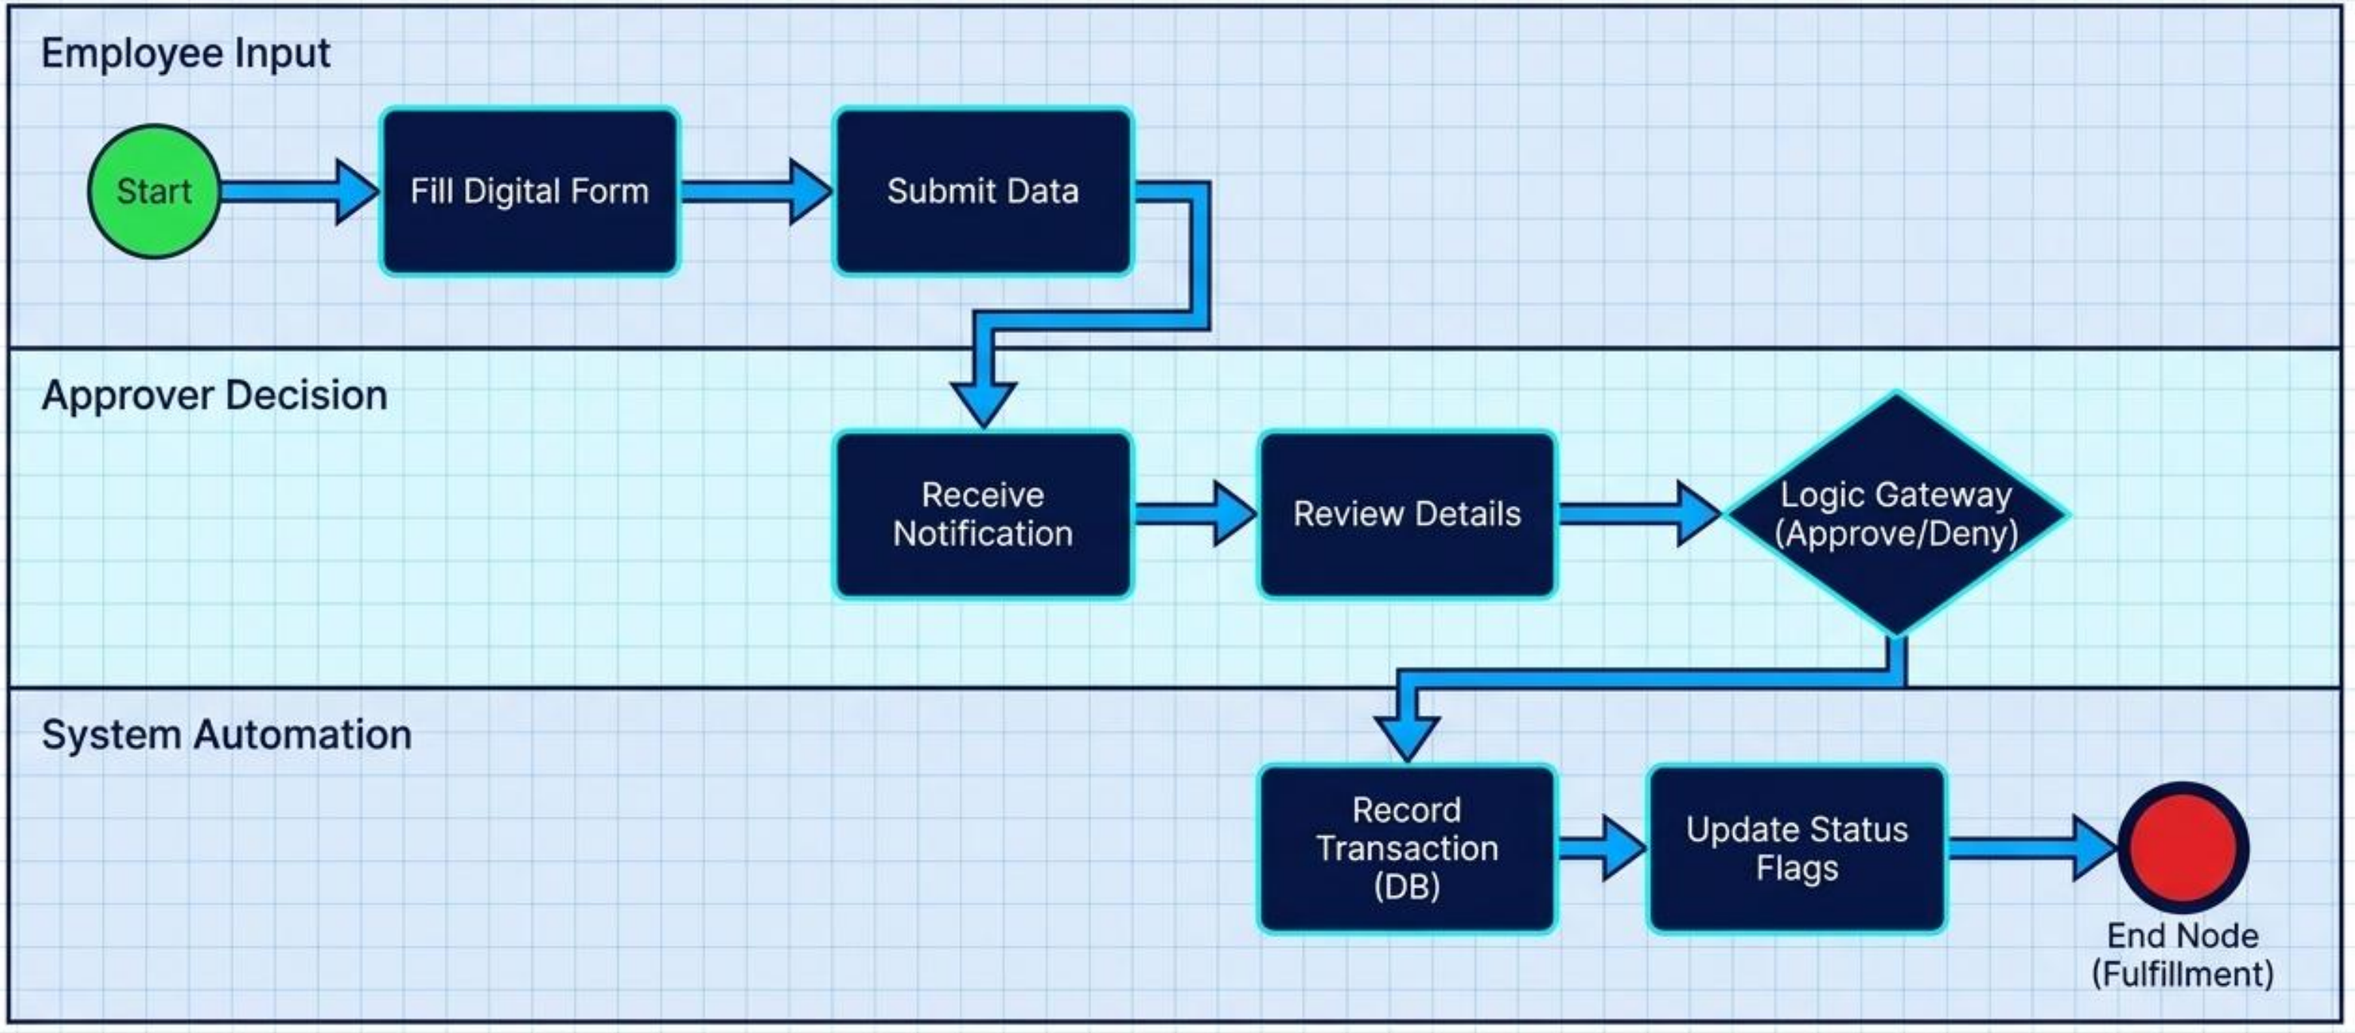

Manual Office Supplies Request Process (As-Is Workflow)

Gemini Notebook

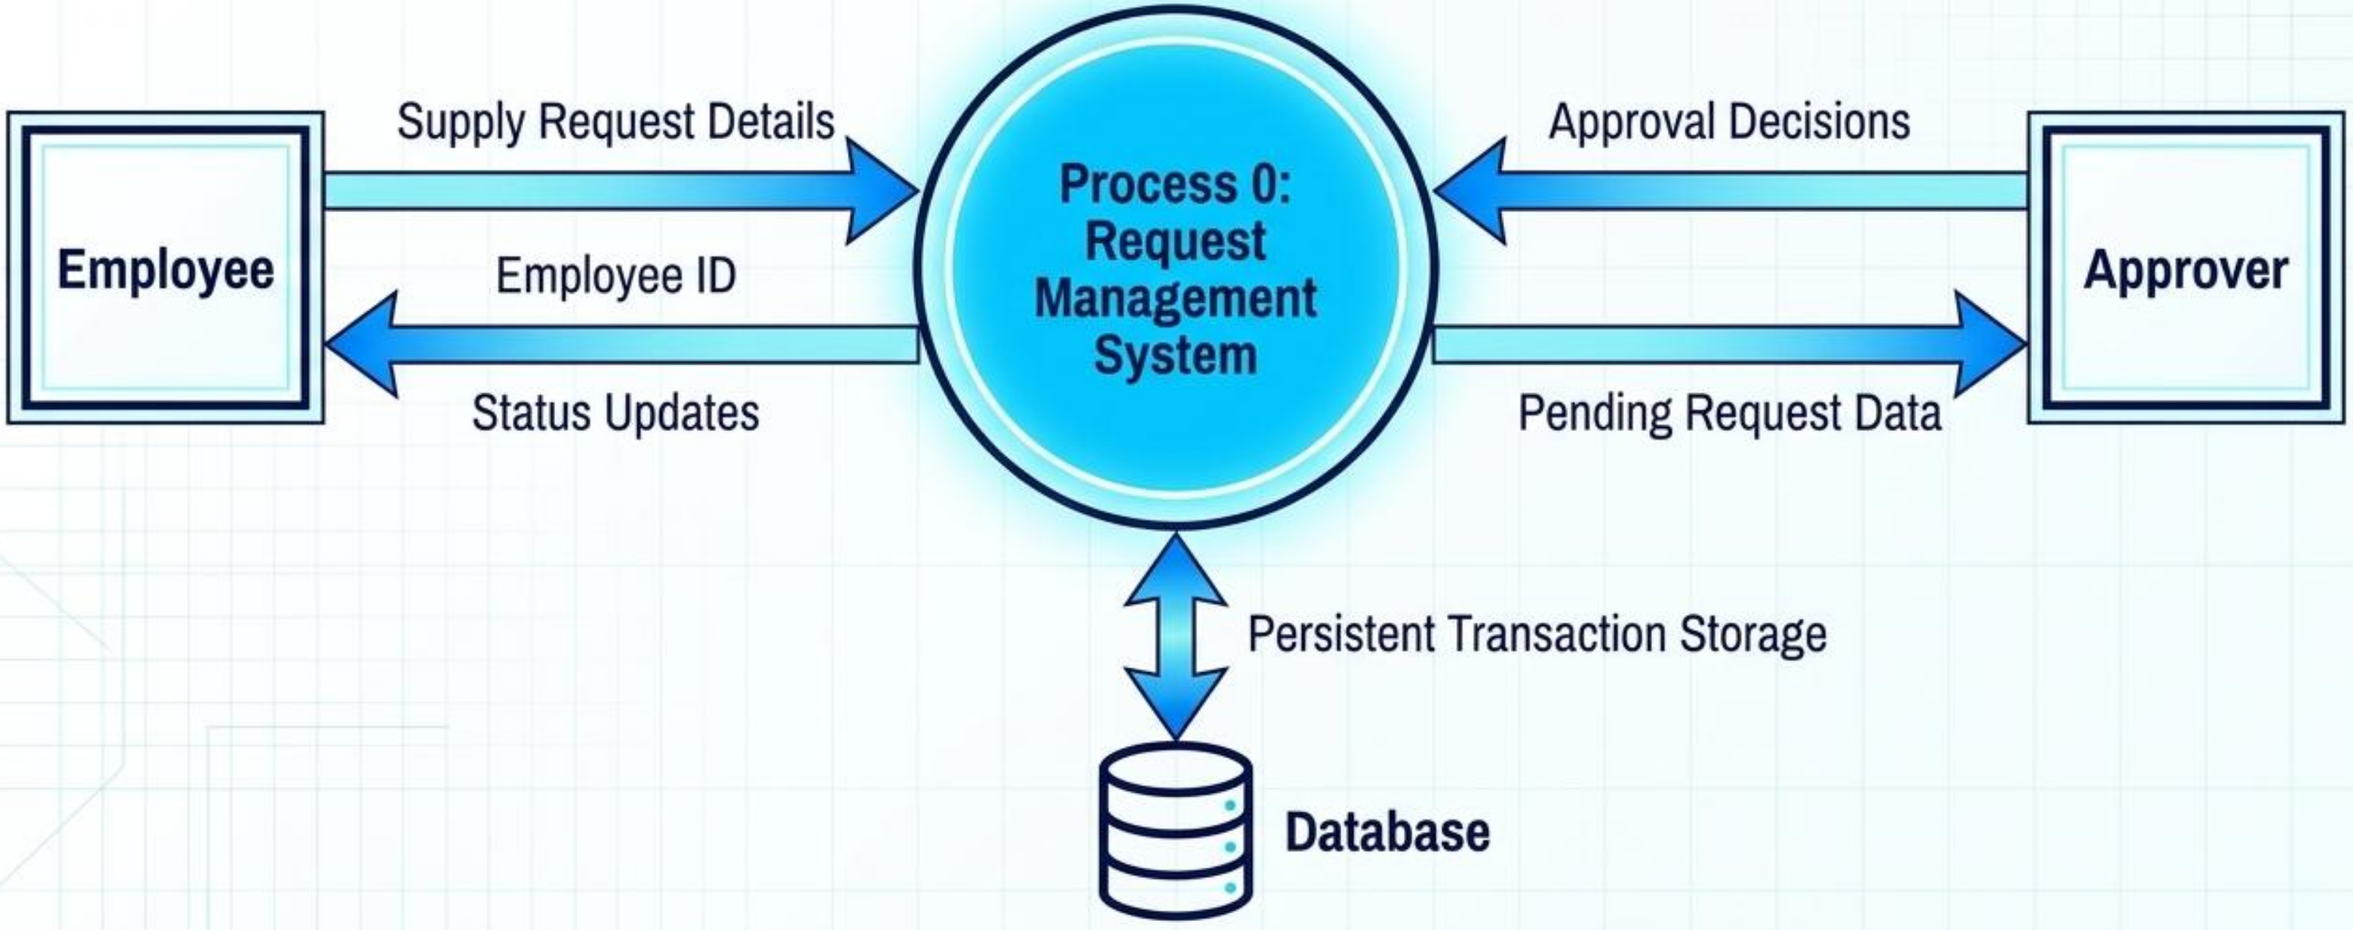

The Optimized Workflow (To-Be BPMN)

System autonomously handles status transitions, eliminating the need for manual follow-ups.

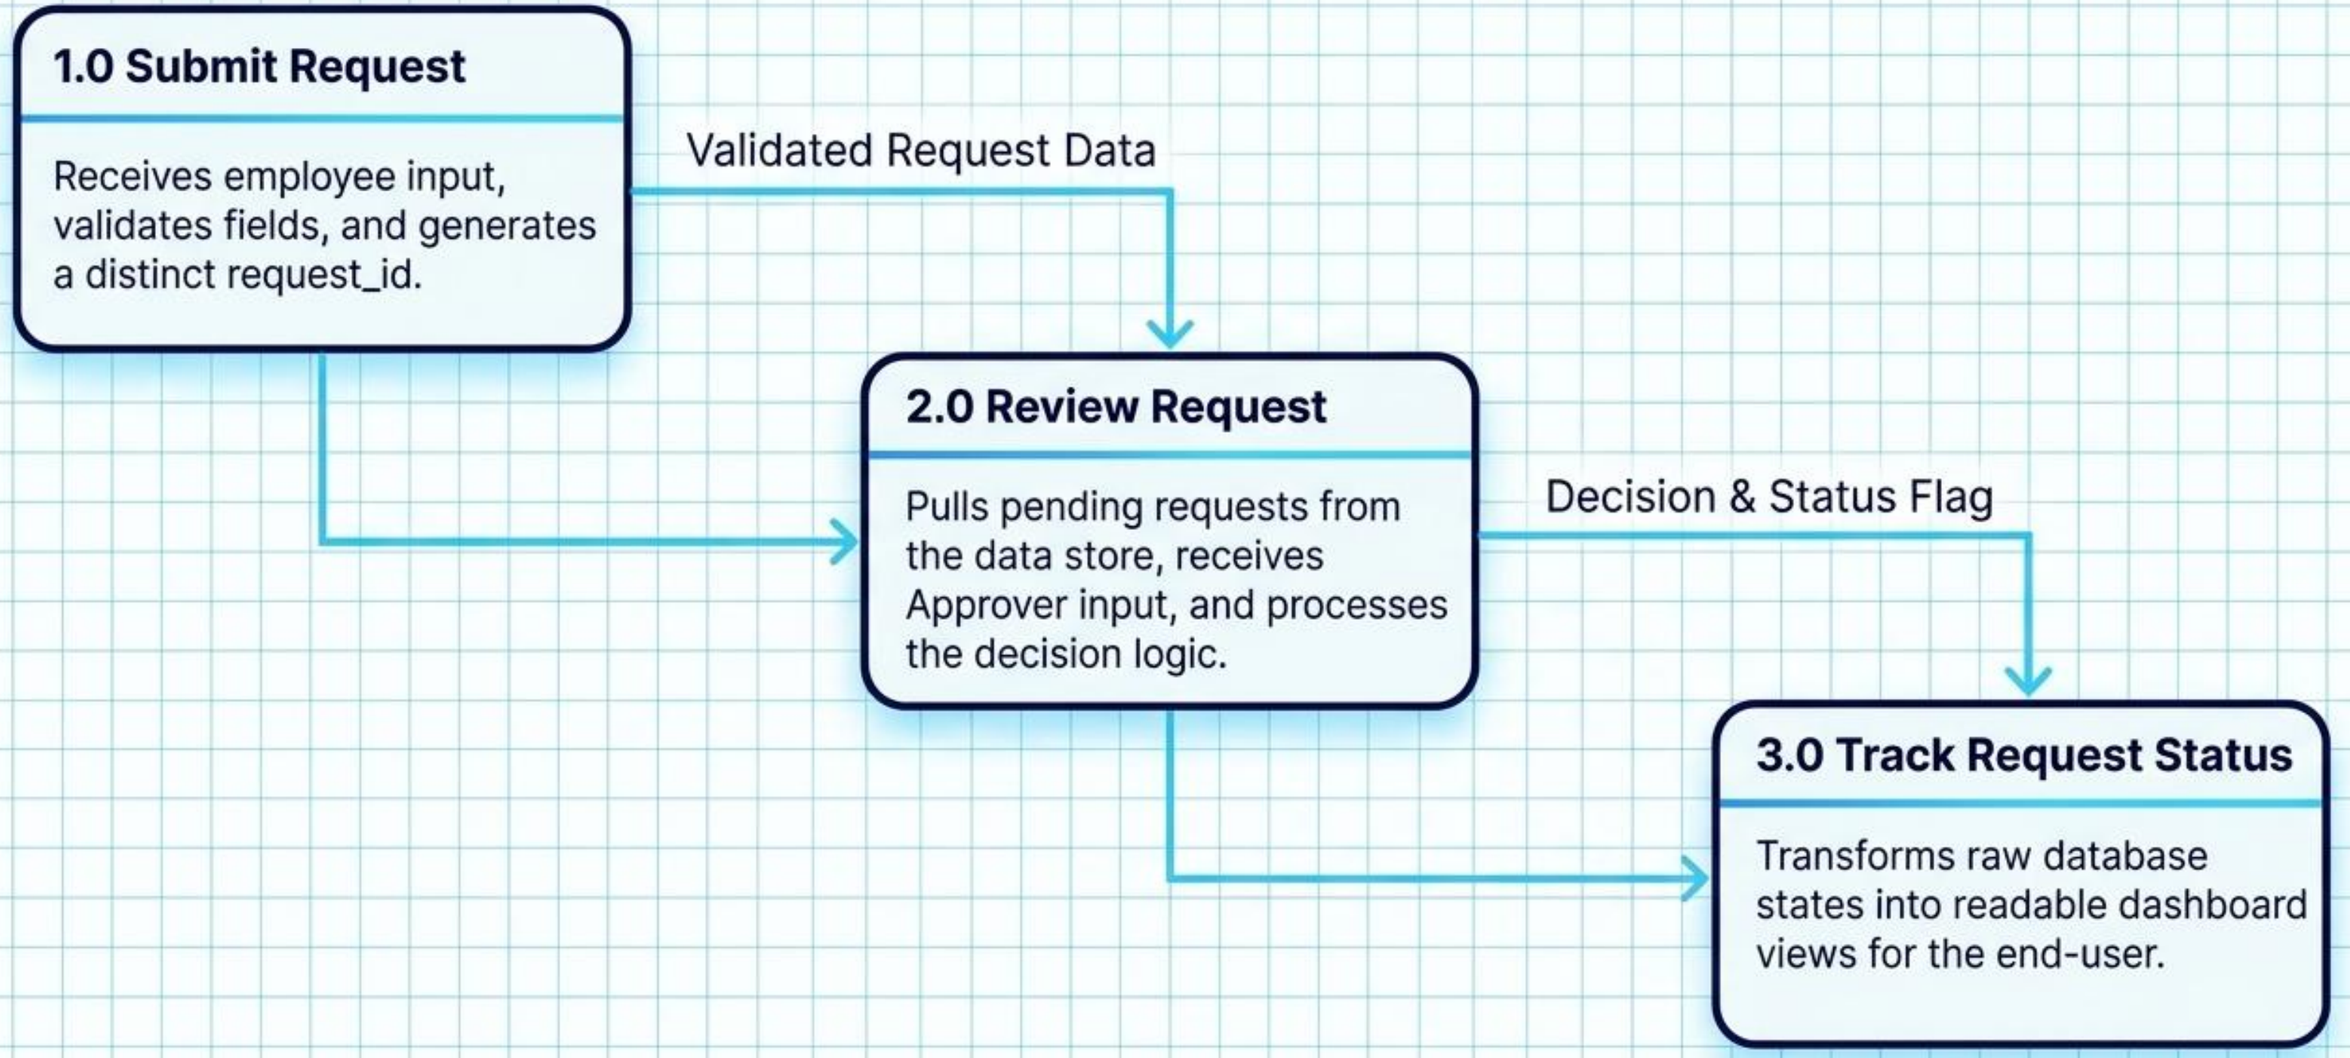

Gemini Notebook

System Context (Level-0 Data Flow)

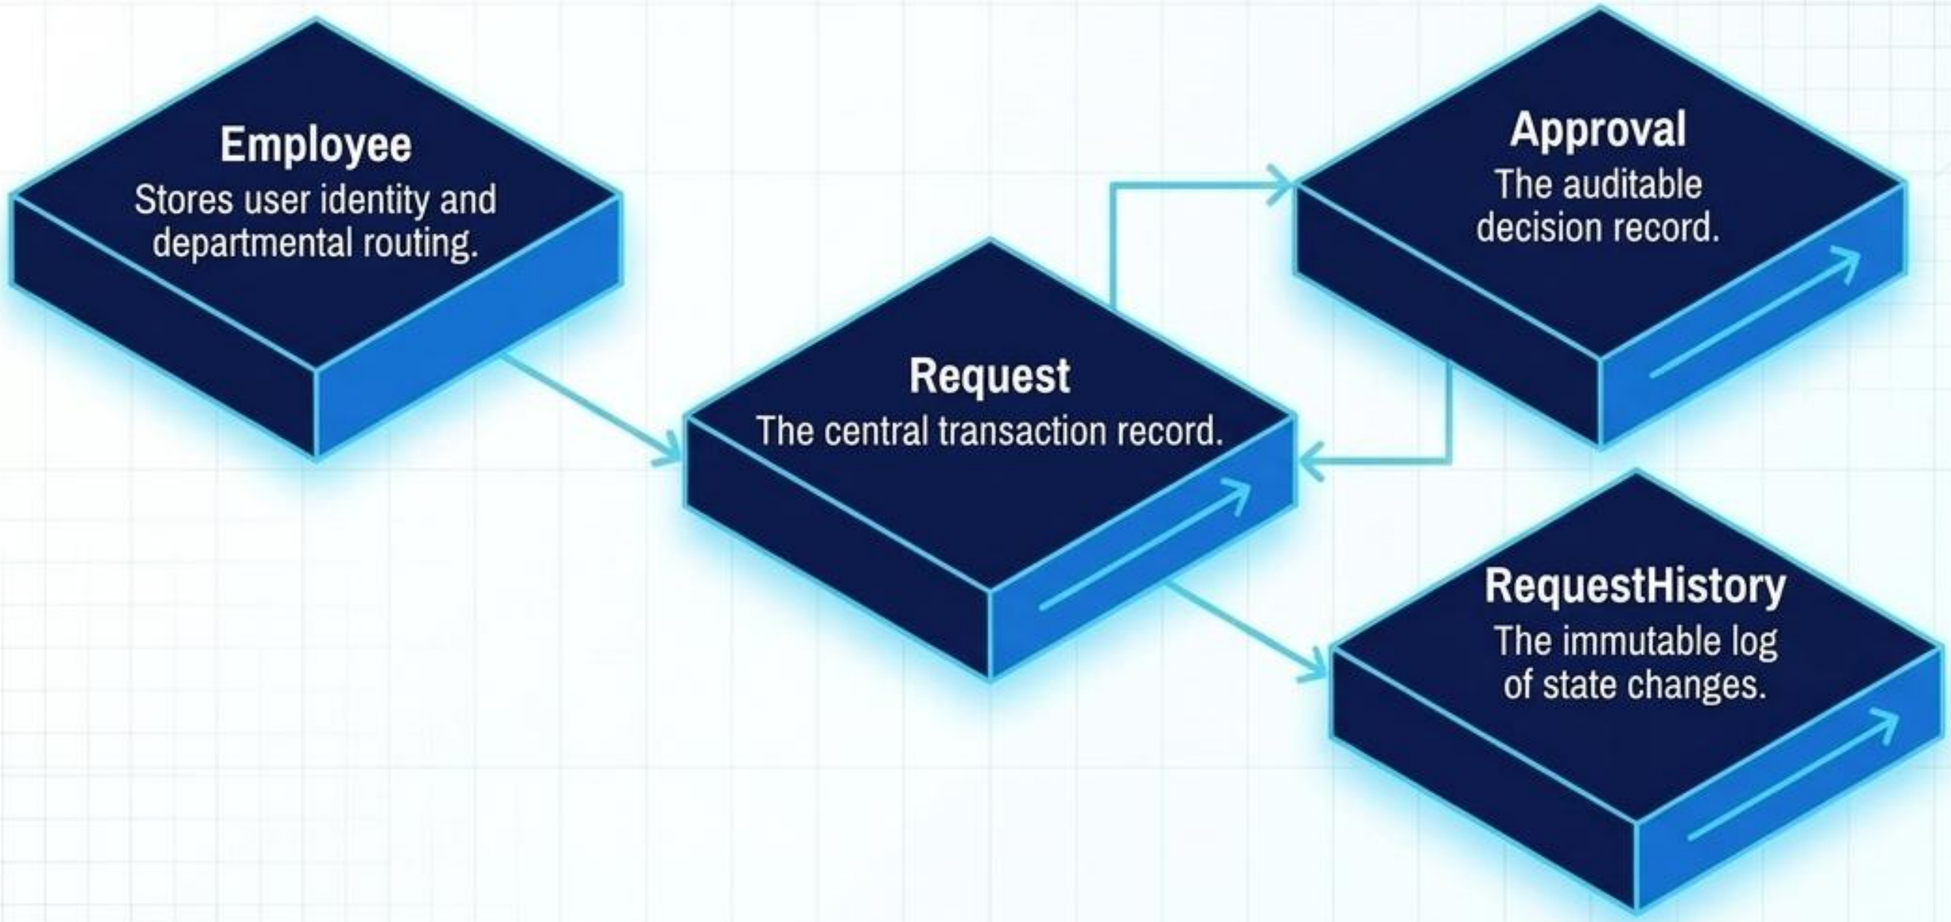

Gemini Notebook

Core Logic Engine (DFD Processes)

Gemini Notebook

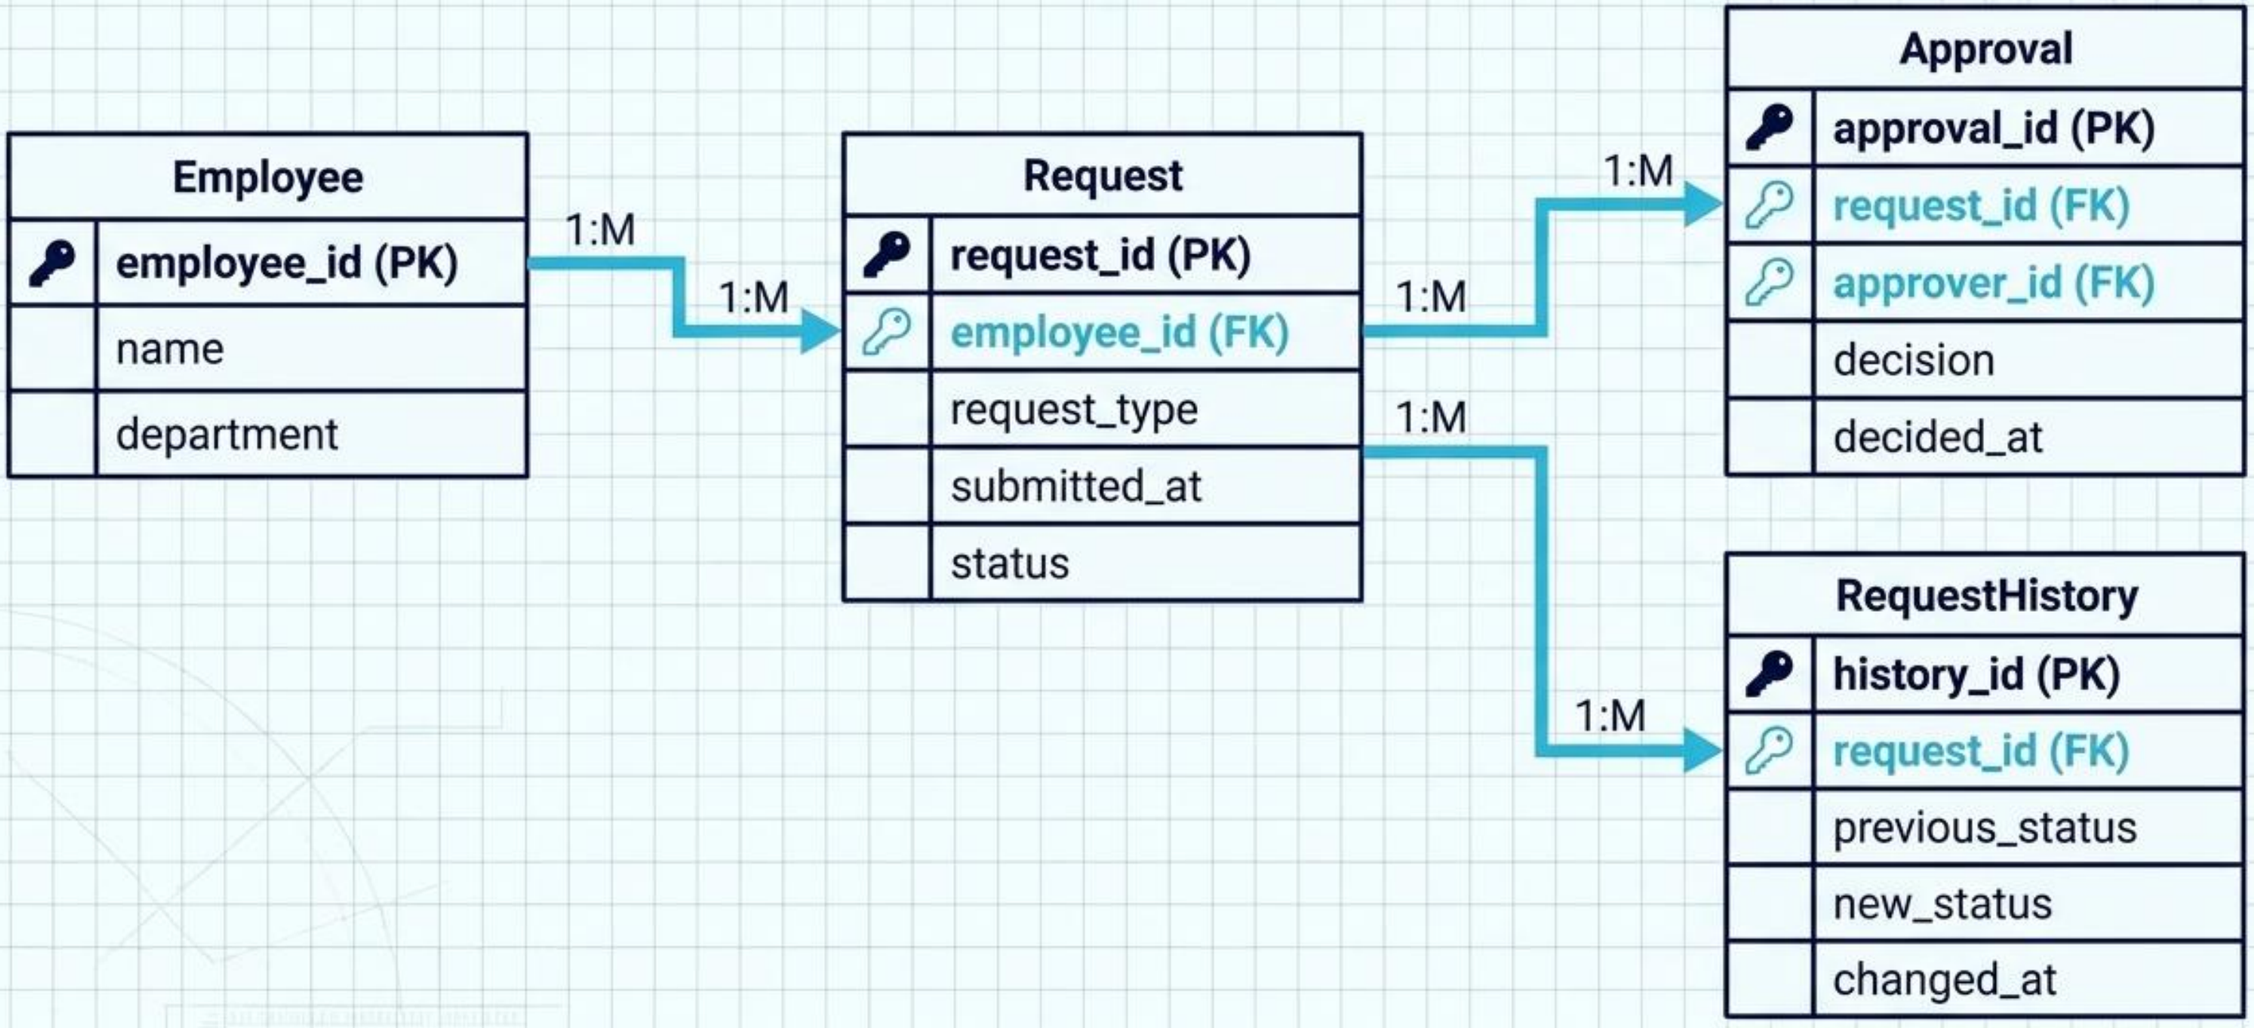

Core Database Schema (ERD)

The system's memory is divided into four distinct entities, ensuring data normalization and preventing redundant record-keeping.

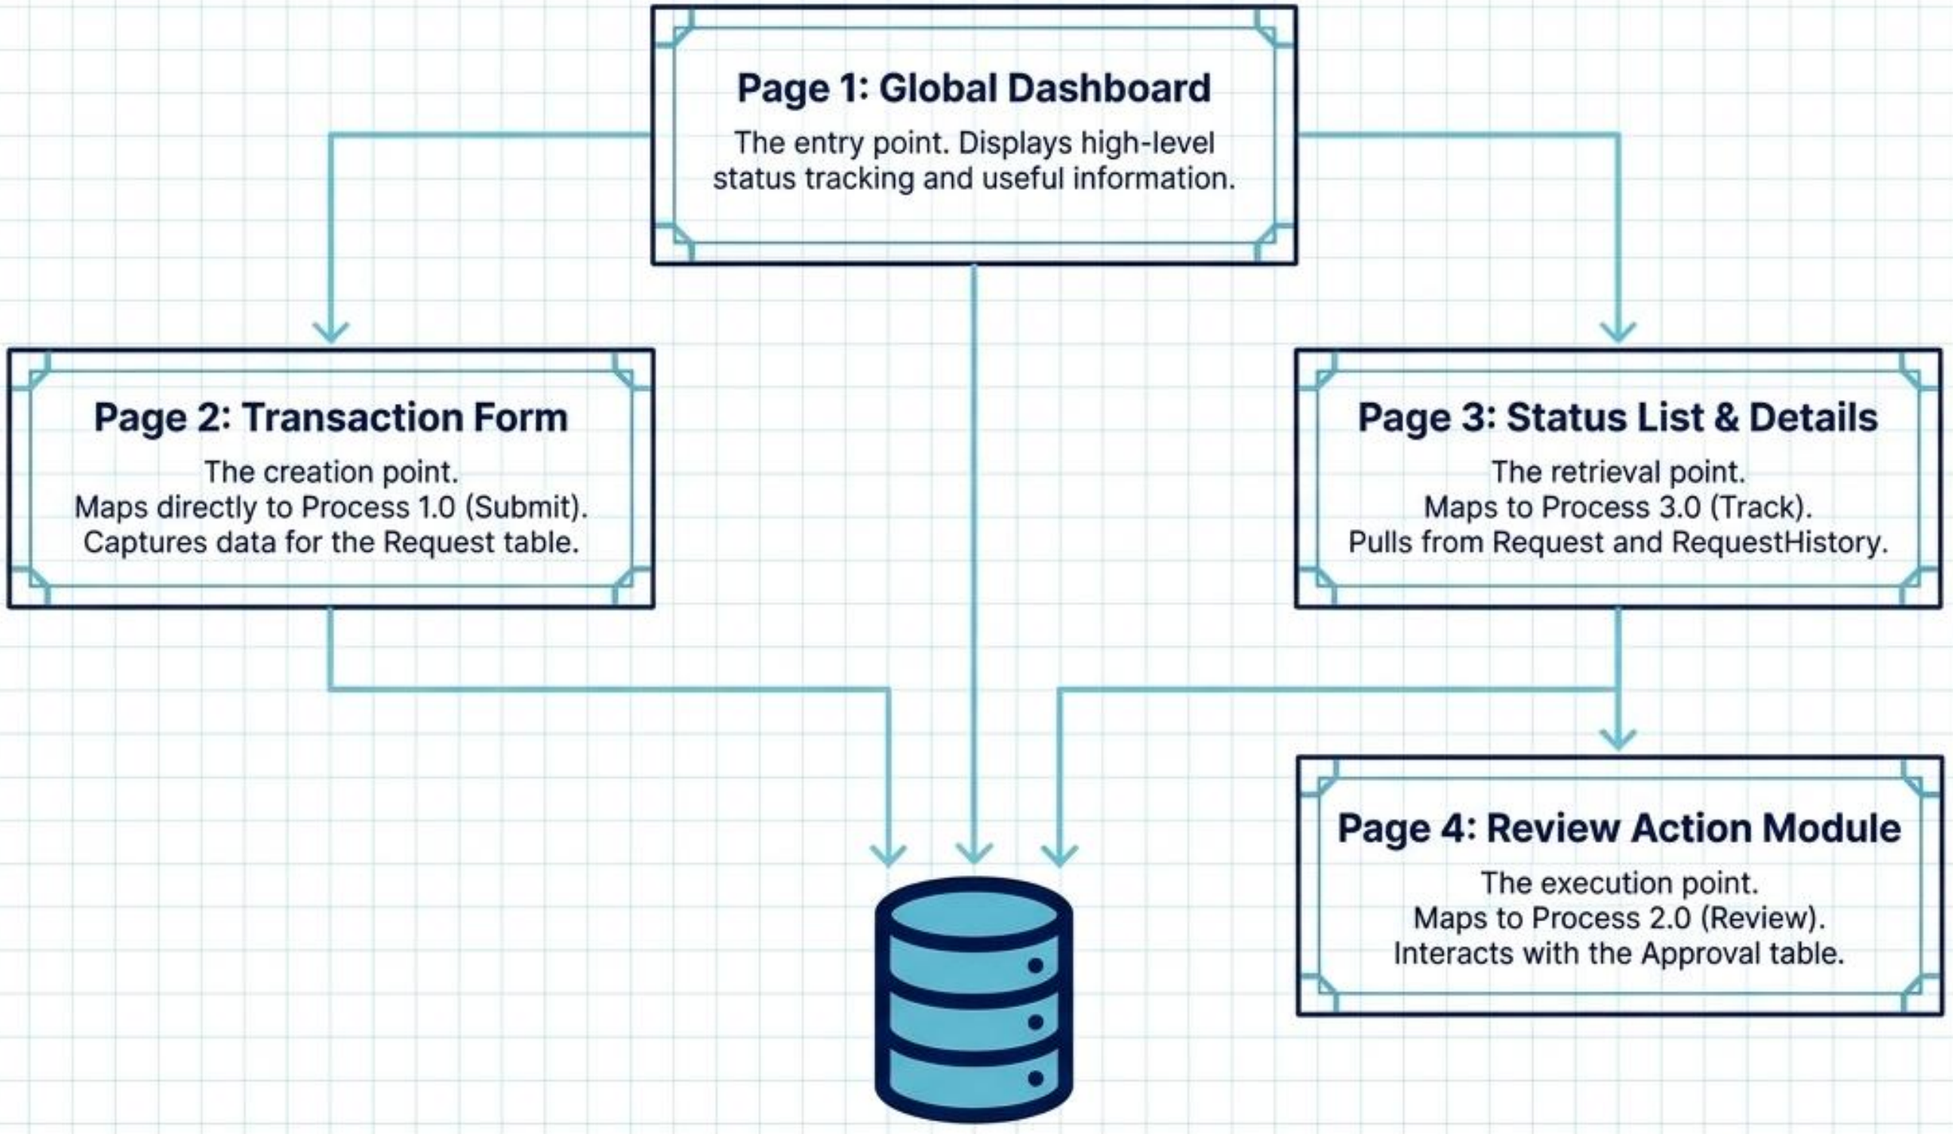

Gemini Notebook

Relational Architecture & Keys

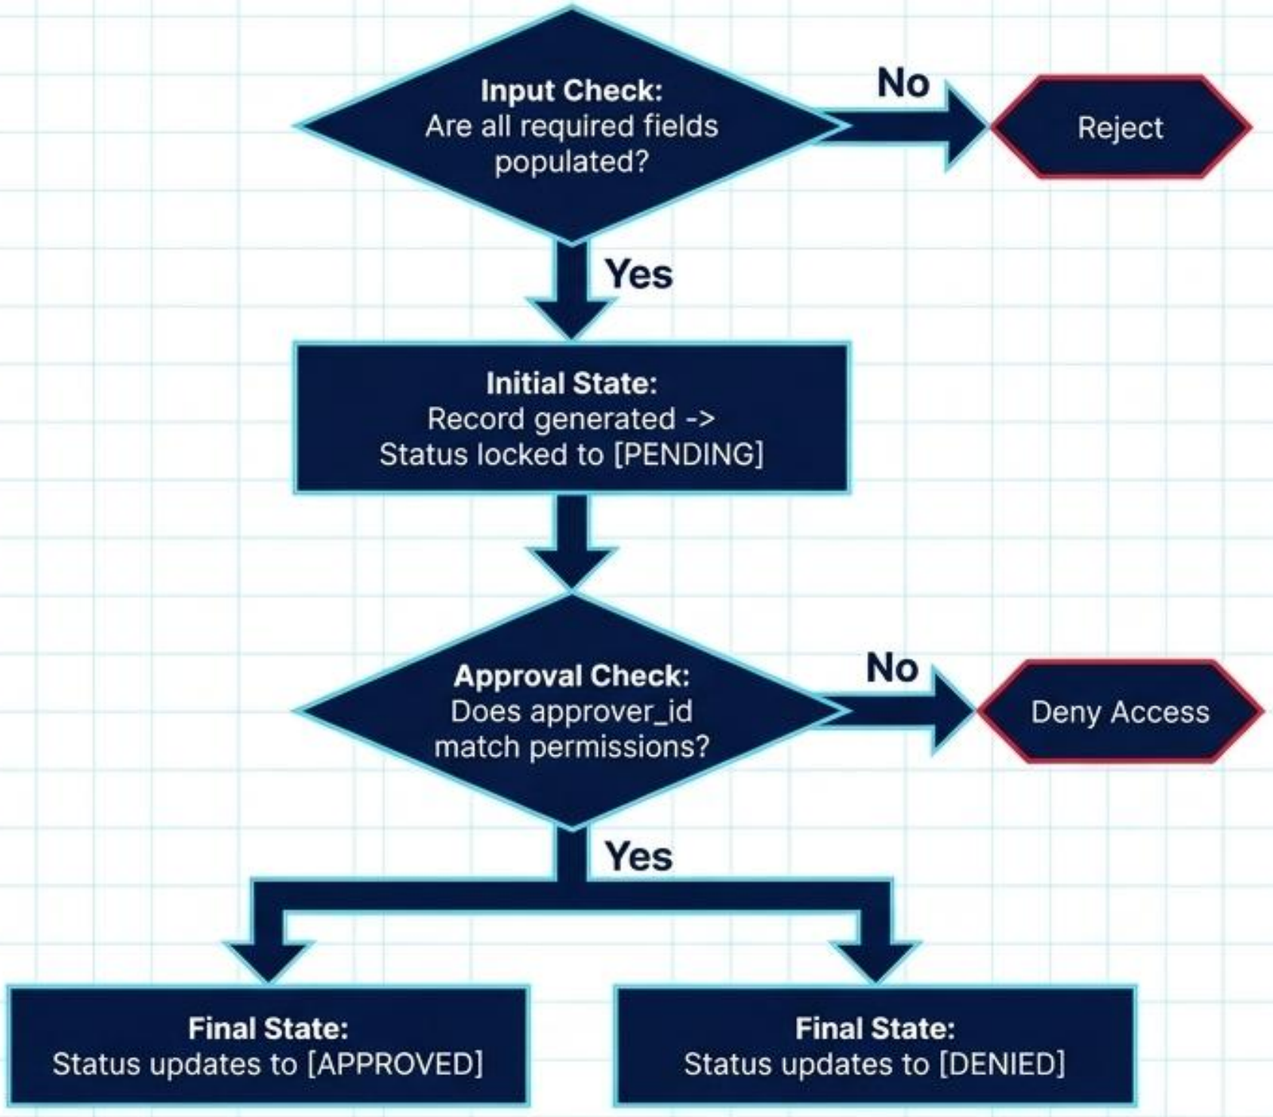

Gemini Notebook

System Page Architecture

Gemini Notebook

Validation & Logic Engine

Persistent Record Storage: Application state remains completely intact when pages are closed or reopened.

Gemini Notebook

Prototype Validation (QA Testing)

PASS

Test Case	Expected Result	Actual Result	Status
Test Case 1: Create Transaction	**Expected:** Valid record is saved to DB.	**Result:** Captured synthetic request ID successfully.	[PASS]
Test Case 2: Retrieve Transaction	**Expected:** Saved record shown on list page.	**Result:** Dashboard successfully queried DB and displayed record.	[PASS]
Test Case 3: Update / Process	**Expected:** Change persists and status updates.	**Result:** Approver action correctly shifted status from Pending to Approved in persistent memory.	[PASS]

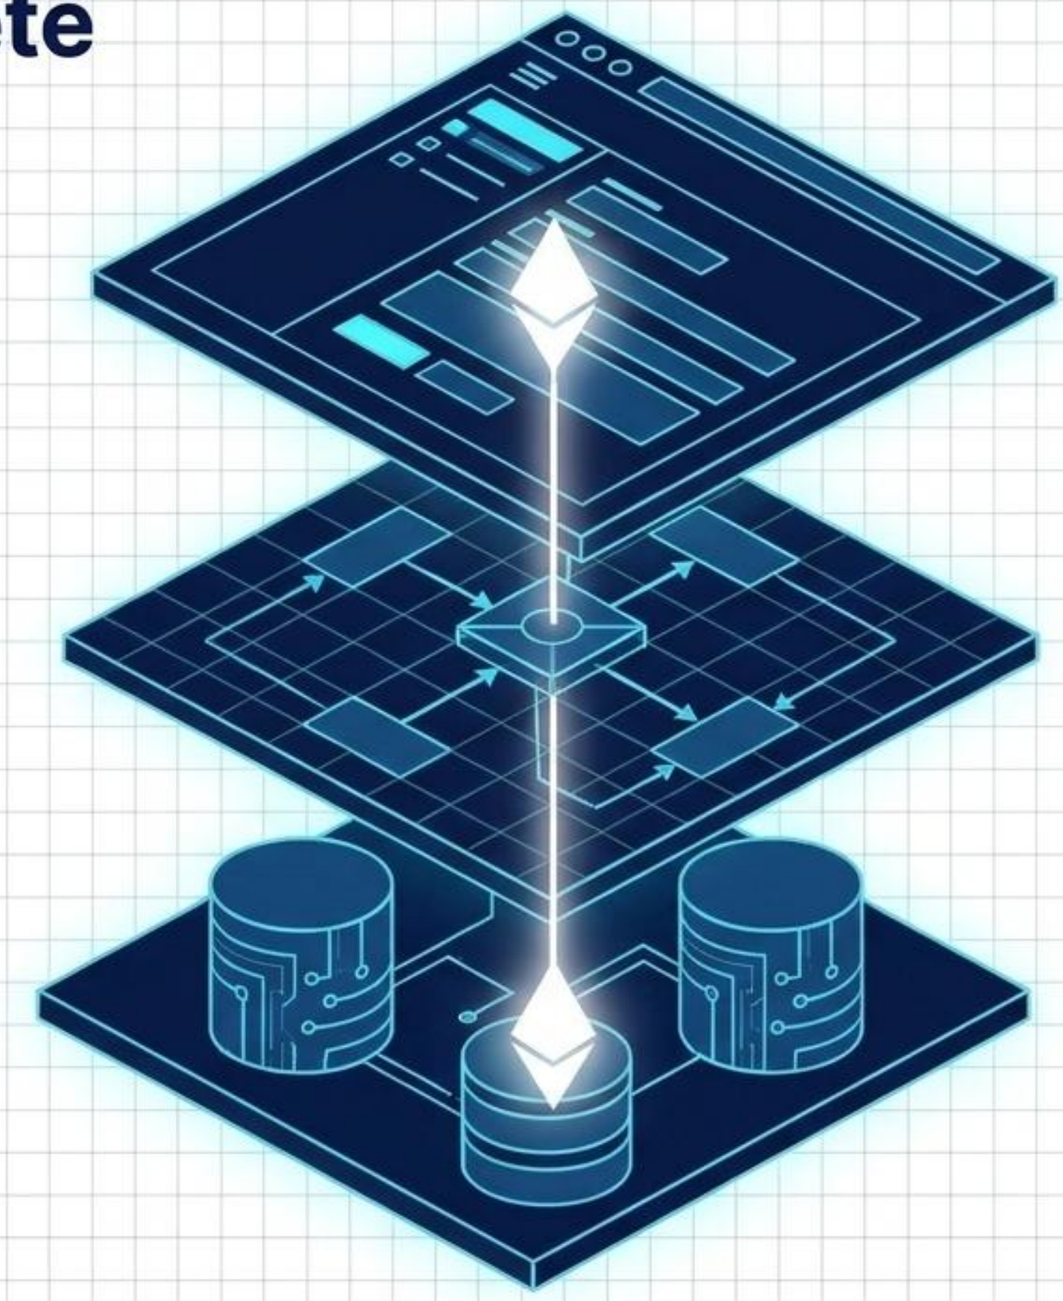

Gemini Notebook

Synthesis: The Complete Transaction

The Interface: Base44 Transaction Form (User Input)

The Logic: DFD Process 1.0 (Validation & Routing)

The Storage: ERD Tables (Request, RequestHistory) receiving the primary and foreign keys.

Gemini Notebook

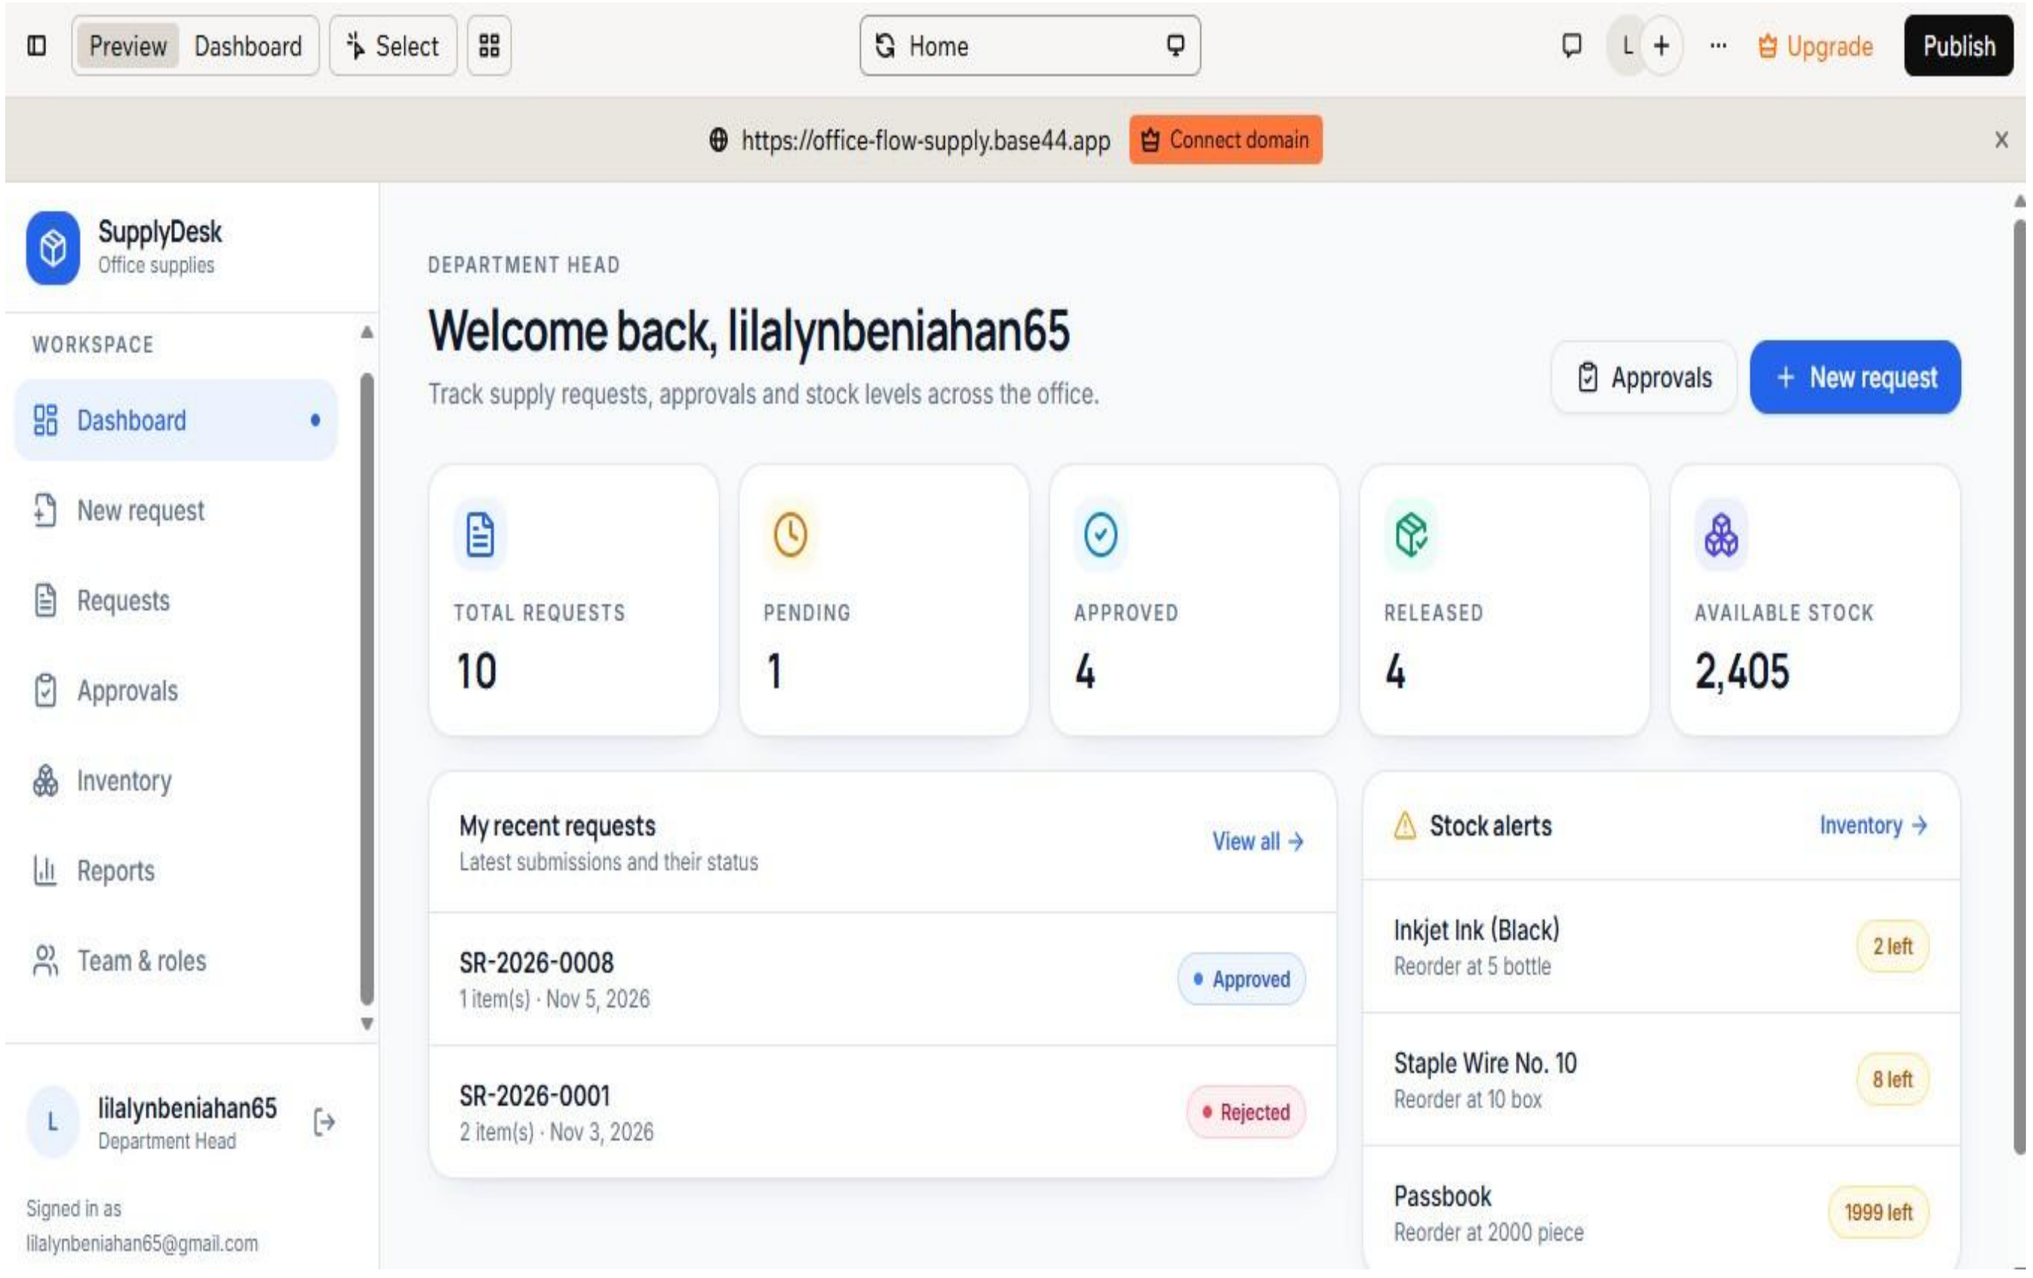

The Final Impact

Blind submissions, manual follow-ups, and lost documentation.

Instant submission, autonomous tracking, and flawless auditing.

By replacing manual friction with a rigorously architected Base44 application, we reclaim lost hours, eliminate operational anxiety, and transform a broken process into a seamless digital workflow.
